

# Importance of Farm Machinery Data for Promoting Sustainable Agricultural Mechanization

# Dr. Surendra Singh

Technical Consultant, CSAM Email: ssingh6116@gmail.com

### Engineering interventions in agriculture sector are required for

Increasing –

- Production & Productivity
- Comfort & Safety
- Return and profitability to the farmers
- **Reducing** -
  - Cost of cultivation
  - Drudgery
  - Environmental footprint

### Through

- Enhanced input use efficiency, and
- Timeliness of operations

# **FARM MECHANIZATION**

Mechanization is a package of technology and farm tools and equipment to

- a. Ensure timely field operations to increase productivity, reduce crop losses and improve quality of agro-produce
- **b.** Increase land utilization and input use efficiency
- c. Increase labour productivity using labour saving and drudgery reducing devices besides, being cost effective and eco-friendly.

## **FARM MECHANIZATION**

- Mechanization indicator is one of the measures of modernization of agriculture of a country
- Availability of farm power or energy per unit area (kW/ha) has been considered as one of the parameters for expressing level of mechanization.

## **Key Elements Influencing Agricultural Mechanization**

Agricultural mechanization status Farm power sources and availability Cropping patterns Cropping intensity Irrigation intensity Production and productivity goals Shifting trend in power sources

Tractor/power tiller annual use and use patterns

- Direct ownership versus custom hiring
- Farm machinery management data
- Augmenting R&D in tractors & farm machinery
- Area for futuristic research
- Farm machinery manufacturing aspects
- Standardization & quality certification
- Credit and financing of tractors and farm machines

## ➤Training

### ESCAPE CSAM

# **Farm Machinery Management**

The importance of farm machinery management has increased in modern farming operations because of its direct relation to the success of management in combining land, labour and capital for a satisfactory profit. Many problems of machinery management are encountered such as:

- i) how many equipment should be owned?;
- ii) What size of equipment is required?;
- iii) How often should the machinery be traded?;
- iv) Should a custom operator be hired or a machine be leased?; and
- v) How can the rapidly increasing fuel costs be kept to the minimum?.

### ESCAPE CSAM

# Farm Machinery Management

In this scenario the farmer needs to prepare himself to satisfy the increasing needs for machinery management. He must learn how to use the machinery; keep complete records of fieldwork done by various machines and the number of working days available for critical field operations; know how to accurately estimate costs for any machine and how to combine costs of machines to estimate total cost for an entire system; know how to improve equipment reliability; improve field efficiencies with machines to cut costs and complete more work in the available time; develop a long-range plan for his farming operations; keep thinking of ways to improve the efficient ownership and management of agricultural machinery; and review the problems encountered

# **Need for Regional Database on SAM**

- Agricultural mechanization is not uniform across the countries in the Asia-Pacific region
- Appropriate/Sustainable mechanization is a complex and continuous exercise due to contrasting needs of region/country i.e. different ecosystems, crops, farming operations, user groups, farmland holders etc.
- Efforts to promote site-specific sustainable agricultural mechanization require a sound regional database

Lack of a uniform database framework hampers effective use of statistics on mechanization

Need to harmonize definitions and units of measurement

Serve as a common reference to ensure compatibility of shared information and guide development of a regional

database in future

Provide tool for capacity building

## Objectives of Guidelines for Collection of Data

- Provide key indicators pertaining to sustainable agricultural mechanization and link them with SDGs' monitoring and reporting efforts
- Provide classifications of identified indicators and further group them into three categories as per need or urgency (i.e. Core, Preferred and Extended indicators)
- Provide definitions, data samples and update frequency of indicators by comparing commonly referred sources, for serving as a reference for national and regional stakeholders

## **Target Group for Guideline**

### **Reference guide for:**

- Staff and practitioners in national offices or research institutes working on statistics related tasks, data collection or processing
- Other researchers and institutions
- Policymakers and policy analysts who need data for policy formulation or evaluation
- Entrepreneurs and enterprises who need to make evidencebased business decisions
- Development partners including NGOs seeking collaborative opportunities

Terms used in Mechanization

Cropping Intensity i.e. how many crops are grown per year = Crops grown per unit cultivated area = Gross cultivated area/net cultivated area

# Gross cultivated area = total use of net cultivated area per year

Productivity (Yield) = Total grain production (tonnes)/area cultivated (ha)

# 1. Land use classification and land holding

### Table 3.1.1a: Land use classification and land holding

| Classification                   |  | Years |  |  |
|----------------------------------|--|-------|--|--|
|                                  |  |       |  |  |
| Geographic area ('000 ha)        |  |       |  |  |
| Forest and other wood land       |  |       |  |  |
| ('000 ha)                        |  |       |  |  |
| Non-agricultural uses ('000 ha)  |  |       |  |  |
| Barren & uncultivable land       |  |       |  |  |
| such as water bodies, hills etc. |  |       |  |  |
| ('000 ha)                        |  |       |  |  |
| Cultivable land ('000 ha)        |  |       |  |  |
| Net area sown ('000 ha)          |  |       |  |  |
| Irrigated area ('000 ha)         |  |       |  |  |

**ESCAP** CSAM **Table 3.1.1b: Average size of holdings by different size classes (ha)** 

| Major size c     |               | Year |  |  |
|------------------|---------------|------|--|--|
|                  |               |      |  |  |
| Marginal         | < 1 ha        |      |  |  |
| Small            | 1 - 2 ha      |      |  |  |
| Semi-medium      | 2 - 4 ha      |      |  |  |
| Medium           | 4 – 10 ha     |      |  |  |
| Large            | 10 ha & above |      |  |  |
| All size classes |               |      |  |  |

### Table 3.4.23: Mechanization index

Mechanization index (MI) is expressed by the *percentage* of machine (motorized) work  $E_M$  to the total farm power availability (e.g. sum of human  $E_H$ , animal  $E_A$ , fossil fuel  $E_F$ , electricity  $E_E$ , and machine work  $E_M$ ) expressed in energy units;

$$AI(\%) = \frac{E_M}{E_H + E_A + E_F + E_E + E_M}$$

 $E_{H} =$  Average sum of all human operational works, kWh/ha  $E_{A} =$  Average sum of all animal operational works, kWh/ha  $E_{F} =$  Average sum of all fossil fuel consumption in agriculture, kWh/ha  $E_{E} =$  Average sum of electricity consumption in agriculture, kWh/ha  $E_{M} =$  Average sum of all mechanical operational works, kWh/ha

| Irrigation pump-sets including pumps, engines, motors |                |  |  |
| 3. Animated power sources                             |                |  |  |
| Tractors  |                |  |  |
| Power tillers   |                |  |  |
| 4. Field preparation and planting machines            |                |  |  |
| Total number of earth-moving/leveling machines        |                |  |  |
| Total number of planters, transplanters, broadcasters |                |  |  |
|   |                |  |  |

#### Table 3.7.7: Agricultural machinery export subsidy-

contd.

| Machinery category                                       | Export subsidy |                           |  |  |
|--|----------------|---------------------------|--|--|
|  | Value          | Proportion of total       |  |  |
|  | (USD)          | amount worth of machinery |  |  |
|  |                | in the given category     |  |  |
| 5. Harvesting and threshing machines                     |                |                           |  |  |
| Diggers/ reapers/binders                                 |                |                           |  |  |
| Threshers/harvesters/ combines                           |                |                           |  |  |
| 6. Postharvest and processing machines                   |                |                           |  |  |
| Drying/ milling equipment                                |                |                           |  |  |
| Other grain processing machines                          |                |                           |  |  |
| 7. Livestock machines                                    |                |                           |  |  |
| 8 Aquaculture machines                                   |                |                           |  |  |
| 9. Plant protection, crop maintenance, and horticultural |                |                           |  |  |
| equipment  |                |                           |  |  |
| Sprayers   |                |                           |  |  |
| Dusters  |                |                           |  |  |
| Weeders  |                |                           |  |  |
| 10. Others, please specify                               |                |                           |  |  |
